

Who this template is for

Marketing leaders, brand managers, and platform administrators in organisations operating multiple brands, sub-brands, or client accounts within ZoikoVertex. Complete each template to define governance boundaries, approval structures, and reporting frameworks across your brand portfolio.

TEMPLATE 1

Multi-Brand Governance Architecture

Define your ZoikoVertex workspace architecture. Each brand or client operates in an isolated workspace with its own brand rules, approval chain, and evidence records. Central governance visibility is maintained through the Executive Command Center.

Workspace Architecture Map — complete for your organisation:

Level	Entity	Workspace name	Brand rules set	Approval chain	Access scope
Organisation	[YOUR ORG NAME]	Root workspace	Central policy layer	Executive Command Center	Compliance, Legal, IT Admin
Brand 1	[BRAND NAME]	[WORKSPACE NAME]	[BRAND RULES SET]	[APPROVAL CHAIN]	[USER ROLES]
Brand 2	[BRAND NAME]	[WORKSPACE NAME]	[BRAND RULES SET]	[APPROVAL CHAIN]	[USER ROLES]
Brand 3	[BRAND NAME]	[WORKSPACE NAME]	[BRAND RULES SET]	[APPROVAL CHAIN]	[USER ROLES]
Sub-brand / marketplace	[NAME]	[WORKSPACE NAME]	[INHERITS FROM?]	[APPROVAL CHAIN]	[USER ROLES]
Agency partner	[AGENCY NAME]	[WORKSPACE NAME]	Client rules (read-only)	Client approval req.	Agency roles only

Governance layer definitions:

Layer	Definition and scope
Central policy layer	Organisation-wide rules that apply across all brand workspaces: data handling, AI model policy, legal hold process

Brand policy layer	Brand-specific rules that extend the central layer: brand voice, permitted claims, channel strategy, regional rules,
Campaign-level governance	Campaign-specific overrides applied within brand policy boundaries: campaign theme restrictions, partner co-branding, etc.
Evidence architecture	All workspaces share the same five-layer evidence architecture. Cross-brand evidence is visible to organisation-level users.

TEMPLATE 2

Brand Isolation Policy Template

Define the isolation boundaries between brand workspaces. Complete per brand pair where cross-contamination risk exists.

Isolation dimension	Policy requirement	ZoikoVertex control	Customer config
Content isolation	No content, assets, or briefs from Brand A spill into Brand B workspace	Workspace isolation by default	[CONFIRM: both brands in scope]
User access	No user has access to more than one Brand workspace	RBAC and workspace scoping	[ASSIGN and filter brand role users]
Brand rule separation	Brand A voice, vocabulary, and claim networks not applicable to Brand B	Per workspace policy set	[CONFIGURE: separate rule sets]
Evidence separation	Brand A evidence packages not accessible in Brand B workspace	Evidence vault workspace scoping	[CONFIRM: role access reviewed]
Approval chain separation	Brand A approvals cannot be fulfilled by Brand B approvers	Workflow separation	[CONFIGURE: cross-brand approvers]
Analytics separation	Brand A campaign performance data not visible in Brand B reporting	ROI Engine in Brand A filter	[CONFIRM: reporting scoped]
AI model separation	Brand A brand voice configuration not visible in Brand B generation	Agent knowledge scoping	[CONFIRM: agent config isolated]
Subprocessor disclosure	Both brands subject to same DPA and organization-level DPA	Organization-level DPA	[CONFIRM: DPA covers all brands]

TEMPLATE 3

Cross-Brand Approval Matrix

Use this matrix to define approval authority across brands for content categories that span brand boundaries: portfolio campaigns, co-branded content, PR, and C-suite communications.

Content category	Brand-level approval	Portfolio-level approval	C-suite sign-off req.	Legal sign-off req.
Single-brand campaign	Brand lead	Not required	No (unless >[THRESHOLD])	If regulated claims
Multi-brand portfolio campaign	Each brand lead	CMO / Portfolio lead	If board-level comms	If regulated claims
Co-branded content (two brands)	Both brand leads	Portfolio lead	No (unless CEO-visible)	Always
Group PR / press release	Comms lead	CMO	CEO sign-off	General Counsel
CEO / executive communications	CMO	CMO	Always	General Counsel
Crisis communications	N/A	CMO + Comms lead	Always	Always — urgent review
Regulated category (financial)	Brand and compliance	Portfolio compliance	No	Always — legal gate
Regulated category (healthcare)	Brand and compliance	Portfolio compliance	No	Always — medical review
Agency-produced (multi-brand)	Each brand lead	Portfolio lead	No	If regulated claims

TEMPLATE 4

Portfolio Governance Reporting Framework

Define the governance KPIs and reporting cadence for your brand portfolio. All metrics are available in the ZoikoVertex Executive Command Center portfolio view.

KPI	Definition	Target	Cadence	Owner
Portfolio throughput	Campaigns launched across all brands per period	SEE TARGET	Monthly	CMO
Brand compliance rate	First-pass brand policy compliance per brand	92% per brand	Weekly	Brand leads
Cross-brand risk incidents	Policy triggers escalated to portfolio level	2/month	Weekly	Portfolio compliance
Approval cycle-time (portfolio avg)	Days brief to approval across all brands	SEE TARGET	Monthly	Marketing Ops
Evidence completeness	Campaigns with fully sealed Evidence Vault packages	98%	Weekly	Legal / Compliance
Override frequency (portfolio)	Policy overrides per 100 campaigns	5% across portfolio	Monthly	CMO / Legal
Brand isolation incidents	Confirmed cross-brand data or access boundary breaches	Zero	Ongoing	IT Security
AI governance maturity score	ZoikoVertex governance coverage	85/100	Quarterly	CMO + CIO

Board reporting pack — include:

- Portfolio throughput vs prior period and vs annual plan.
- AI governance maturity score trend (quarterly).
- Compliance incident summary: triggers raised, cleared, overridden, escalated.
- Evidence completeness rate: % of campaigns with complete audit evidence packages.
- Cross-brand risk incidents: any isolation boundary events and remediation status.
- Pending certifications: SOC 2 Type II, ISO 27001 — progress and expected completion.
- Responsible AI governance statement: NIST AI RMF alignment summary.

Portfolio governance maturity model

Level 1 — Foundation: single approval layer, evidence capture active, brand rules loaded. Level 2 — Optimisation: risk-based routing, SLA timers, cross-brand visibility in Command Center. Level 3 — Maturity: multi-stage approval, autonomy expansion, portfolio KPI reporting for board. Level 4 — Excellence: full NIST AI RMF alignment, SOC 2 / ISO 27001 certified, governance as competitive differentiator.
